

Patent  
Serial No. 10/518,252

Amendment in Reply to Final Office Action of August 4, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A data carrier comprising demonstration control data configured to control a demonstration of an inherent function of a playback device wherein the inherent function includes use of an external data network and wherein the data carrier is configured to simulate access to the external network regardless of whether the external data network is currently available.

2. (Previously presented) The data carrier of claim 1, wherein demonstration data are provided for the demonstration of the inherent function of the playback device, wherein the demonstration data includes virtual data to emulate the external data network.

3. (Currently amended) The data carrier of claim 1 or claim 2, wherein the data carrier is an optical disc and readable in an optical way.

4. (Previously presented)      The data carrier of claim 3, wherein the data carrier is in accordance with a CD-ROM standard.

5. (Previously presented)      The data carrier of claim 1, wherein the demonstration control data are constructed as a script file.

6. (Previously presented)      The data carrier of claim 2, wherein the demonstration data are provided in a compressed format.

7. (Currently Amended)      A playback device comprising:

at least one signal processing means for processing a signal;  
switching means for switching the playback device into a demonstration mode in which a demonstration of an inherent function of the playback device can be performed;

supply means for supplying demonstration data for the demonstration including emulation of data from an external data network regardless of whether the external data network is currently available;

data reading means for reading demonstration control data of a data carrier which comprises demonstration control data for

performing the demonstration including emulating use of accessing  
the external data network;

processing means for processing the demonstration control data  
such that the demonstration data are transmittable to the at least  
one signal processing means during processing of the demonstration  
control data.

8. (Previously presented) The playback device of claim 7,  
wherein the reading means are constructed for reading an optically  
readable medium.

9. (Previously presented) The playback device of claim 7,  
wherein the reading means are constructed for reading the data  
carrier in accordance with a CD-ROM standard.

10. (Previously presented) The playback device of claim 7,  
wherein the data carrier is removable.

11. (Previously presented) The playback device of claim 7,  
wherein the supply means are formed by the reading means, while  
said reading means in addition are designed for reading the

demonstration data for the demonstration of an inherent function of the playback device wherein the inherent function includes use of an external data network.

12. (Previously presented) The playback device of claim 7, wherein the processing means are constructed for processing demonstration control data in the form of a script file.

13. (Previously presented) The playback device of claim 10, wherein recognition means are provided for recognizing the removable data carrier.

14. (Previously Presented) The data carrier of Claim 1, wherein the inherent function includes interaction with a user.

15. (Currently Amended) A data carrier comprising demonstration control data configured to control a demonstration of an inherent function of a playback device wherein the inherent function includes interaction with a user and wherein the data carrier is configured to simulate accessing an external network regardless of whether the external data network is currently available.

Amendment in Reply to Final Office Action of August 4, 2006

16. (Previously Presented) The data carrier of claim 14, wherein demonstration data are provided for the demonstration of the inherent function of the playback device, wherein the demonstration data includes virtual data to emulate access to an external data network.
